

AI Business OS - Vision

One-line Vision: Build an AI Operating System that runs marketing, sales, support, and repetitive operations for SMBs from one platform.

Problem: Small businesses juggle websites, CRMs, social media, ads, emails, WhatsApp, bookings, and support across many disconnected tools.

Solution: One onboarding flow where a business uploads its information and connects accounts. AI builds a website, learns the business, creates content, answers customers, manages leads, automates follow-ups, and provides analytics.

Core Modules

- AI Onboarding & Knowledge Base
- AI Website Generator
- Marketing Automation
- CRM & Sales AI
- Customer Support AI
- Operations Automation
- Analytics Dashboard

Target Customers: Restaurants, gyms, clinics, salons, real estate agencies, schools, hotels, and other SMEs.

MVP Roadmap

Phase 1: Onboarding, website generation, chatbot, CRM.

Phase 2: Marketing automation, WhatsApp/email/social scheduling.

Phase 3: Multi-agent AI workforce and industry templates.

Why Now?: AI models are mature, automation tools are common, but businesses still lack a unified AI operating system.

What I'm Looking For: Developers, AI engineers, designers, marketers, and business strategists interested in building an ambitious startup together.
